

Voyant Health's integrated solutions cover your entire workflow—linking the clinic to the hospital, the OR, and beyond.

VoyantFlow™

Make the most of exam room time.

Swipe card, see image. Seize the clinical moment and spend every second with your patient. No log in, no searching, no image loading.

VoyantFlow provides effortless distribution of your patients' images to exam rooms. Walk into the exam room, swipe a card, and instantly view the patient's images. Integrates with all PACS systems and saves you an hour each day.

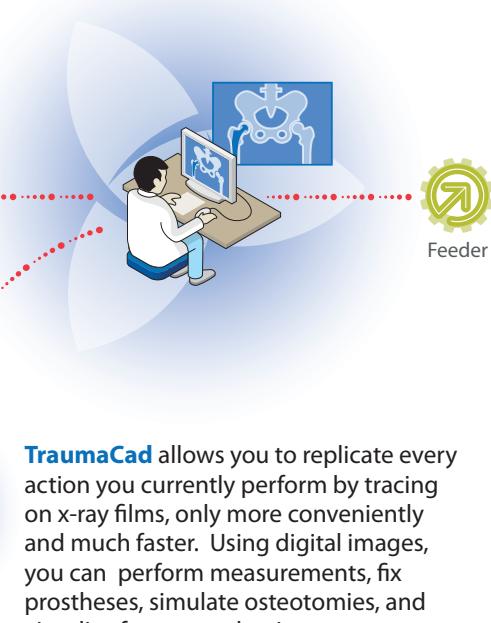

Connect to your PACS
Compatible with practically every PACS system in the market.

TraumaCad™

Template effortlessly. Plan confidently.

Enjoy confidence in digital templating. Measure, plan, and visualize. Improve speed and accuracy.

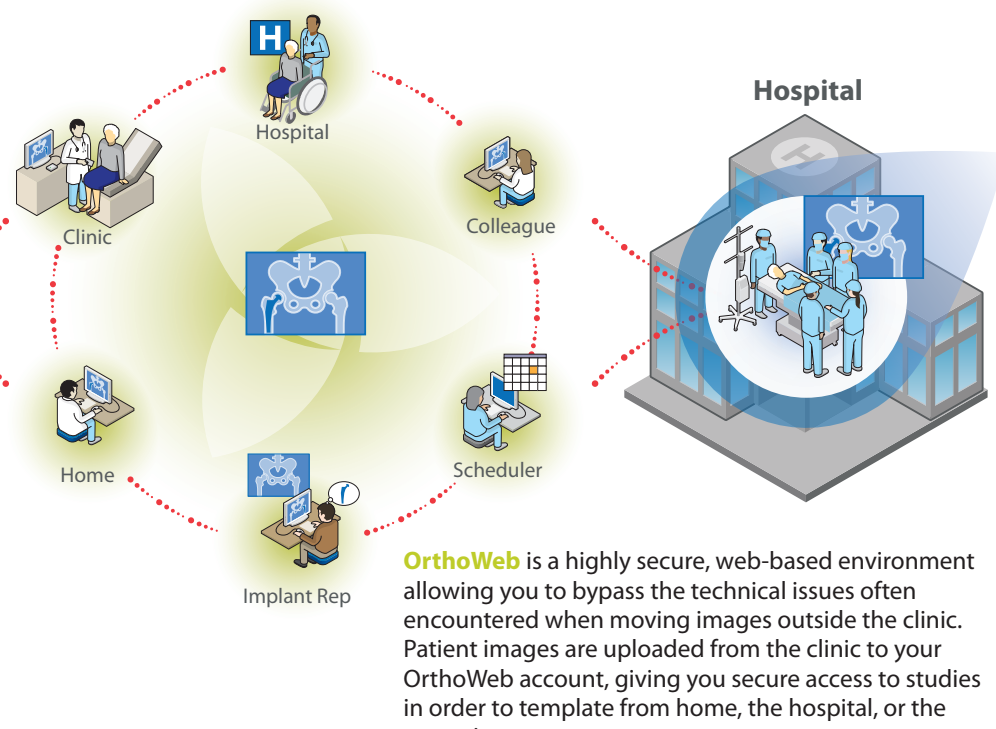

TraumaCad allows you to replicate every action you currently perform by tracing on x-ray films, only more conveniently and much faster. Using digital images, you can perform measurements, fix prostheses, simulate osteotomies, and visualize fracture reductions.

OrthoWeb™

Extend planning beyond your clinic.

Bypass technology barriers and link your clinic to the hospital, the operating room, and beyond.

OrthoWeb is a highly secure, web-based environment allowing you to bypass the technical issues often encountered when moving images outside the clinic. Patient images are uploaded from the clinic to your OrthoWeb account, giving you secure access to studies in order to template from home, the hospital, or the operating room.

BrainLAB™ NEW!

Digital Lightbox

TraumaCad™ TOUCH

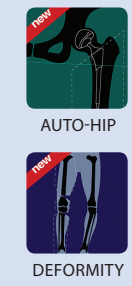

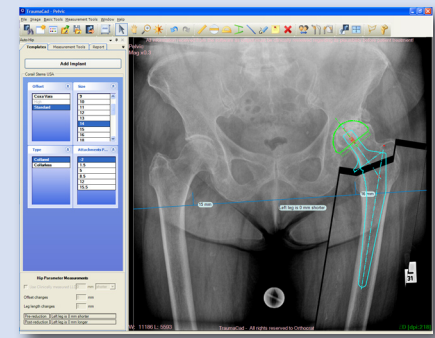

Extend templating and planning into the OR
Combine TraumaCad with BrainLAB Digital Lightbox® technology to extend digital templating and surgery planning beyond the clinic to the operating room itself. Compatible with BrainLAB navigation systems.

Built on a cloud
VoyantWeb is an innovative technology platform that ensures seamless integration of Voyant Health solutions and related applications with different back-end systems.

TraumaCad™

10 planning modules

- Auto-Hip**
Place your preferred stem in the right position, at the right size, with a single click.
- Auto-Deformity Correction**
 - Click on anatomic landmarks and define multiple CORAs.
 - Automatic segment-definition and "finish and cut".
 - Automatic measurements: pre- and post-surgery.

Use your favorite implants
Over 90,000 template images are available in an "evergreen" library. Choose templates by manufacturer, procedure, or recently used. Create your favorite kits and use them with a single click.

TraumaCad™ ENTERPRISE

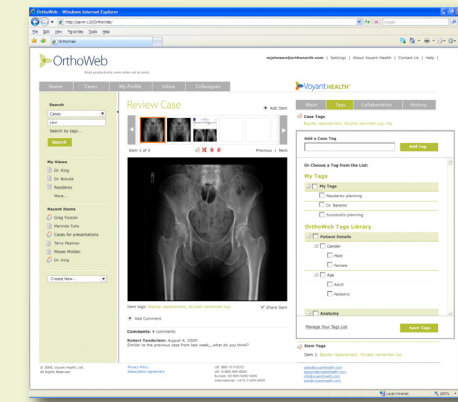

Bring complete TraumaCad functionality—all 10 planning modules—to any PC within your network. Access images from any PACS and plan surgeries from any location within your enterprise—even the operating room.

TraumaCad™ EXTEND

Offers secure, web-based accounts that allow referring surgeons to plan and template anywhere—the hospital, the clinic, or even at home.

OrthoWeb™

A new way to work

Form a community
Invite colleagues to collaborate on clinical cases with you. Track and manage the conversation for each case. Send your entire team notifications of locations, schedules, list of implants, etc.

Comprehensive tagging system
Tag cases and items by standard medical terminology or your own customized tags to improve searching and organization.

Log in to a secure web server
Your information is stored securely, and may only be accessed by you and authorized partners. 100% HIPAA-compliant.

Bypass technology barriers
Access images and template images in the OR. View, edit, and refine plans directly in TraumaCad using BrainLAB Digital Lightbox.

Upload images automatically
OrthoWeb Feeder automatically uploads medical data to your OrthoWeb account

from your digital x-ray system, or automatically pulls from PACS. Patient information is encrypted and secured.

Voyant HEALTH™

The new face of TraumaCad and Orthocrat—
bridging your orthopedic workflow gap.

Integrated Solutions
