

Swipe card, see image. Seize the clinical moment and spend every second with your patient. No log in, no searching, no image loading.

VoyantFlow™ saves time and eases busy clinic days for surgeons and staff by effortlessly distributing patient images to exam rooms. Images are instantly available in the exam room simply by swiping a card. Integrates with all PACS systems.

Control patient workflow from one point
VoyantFlow's "cockpit" allows you to send patient images to exam rooms from a single workstation. You can see an at-a-glance view of room assignments and any image's status as well as move patients from room to room quickly to respond to changes.

Find studies quickly
Search for studies matching specific criteria. For example, you can view studies assigned to a specific doctor for today. Selecting "saved searches" gives you convenient access to frequently used searches.

Optimize exam room time
No login, no searching, no image loading when entering the room. Swipe a card over the card reader and the correct images are ready and waiting. Swipe the card again, and the image is covered and locked. Saves busy surgeons and staff up to an hour each day.

Protect data security and patient privacy
Exam room monitors are HIPAA-locked and the patient cannot use the computer in any way. A card swipe is required to unlock the images.
